Abstract:- In this paper we are discussing about the environment completely. Here our aim is better than later to know mistakes and correcting it. As we are in critical state to survive on earth. Also we will come to know how men utilizing the environment. The evils created by the human paternity in earth: pollution, increasing temperature, deforestation, chemicalizing both soil and water. Polluting air as well sunrays. We will discuss here about the effects of all this problems created by the human, like dangerously facing health problems, unbalancing environment, disappearing of many species, both in case of animals as well in plants and finally how earth has becoming place which will become unfit to live. Here we are not just identifying the problems or mistakes of human. Our main aim is to solve the problem making the environment friendly to human. For that men how they have to change themselves are going to discuss like non-utilization of plastic, proper utilization of natural resources, a forestation, stoppage of chemicals in agriculture, minimization pollution.

I. INTRODUCTION

Environment a much known word to each and every human being but very complex. As environment is not same as it was in the initial days of human being born on earth. Because men added to it n-number of things in which many are not required for environment. Environment has given everything to live comfortably on earth. But men with over greediness and our ambition utilizing environment to a maximum extent. By this process we human being created different environment on earth completely different from our existence. The environment which men created is becoming unfit to live because of imbalance which has happened in the natural environment which is because of human activities on earth without boundary. Now our concern here is how to safeguard our self safely by bringing balance in the environment as men is in search of other planet to live by escaping from earth. That is the amount of fear human is getting because of his misdeeds. Before going to the problem we will know what is actually environment is all about and then we will go inside of it.

II. DEFINITION TO ENVIRONMENT

In general sense environment means very simple that the surrounding where we live, in which human is small part actually. But as time prolonged men called him different from other living hood on the earth and he has started so called development from the beginning of the earth's existence. As he was small part of environment now natural environment become very small part of men's so called developed environment by neglecting and rejecting

what god has given to him. In comic sense we can tell now that environment on earth is not created by god, it is human gods! Invention and creation, by destructing the natural environment, By knowing destroying himself and putting full stop to whole living on earth.

III. THE PATH OF DESTRUCTION

As god created this earth by creating a beautiful and safe environment and given us the place to live happily and comfortably. As time goes on men identified him that he is different from all other in the environment. As he is maturing he is started distancing from all the parts of the natural environment and started dominating by putting legs in every part of the environment and creating his own creatures.

As men go on changing his way of living from time to time he started exploiting environment slowly from generation to generation. When men started his life by making his own group and started using resources and creating things which he needs for his daily need.

Men first step is started with agriculture by starting clearing trees from forest and preparing soil suitable for agriculture for food for him.

As second step of agriculture he was started constructing dams for storing water for agriculture purpose through that disturbed environment by removing trees and started deforestation.

As men started improving his living style. He started constructing houses by using natural resources. After that he has improved further in living style. He has started inventing many things to improve his living condition like transport and infrastructure to transportation like roads, railways, water ways, airways etc. For all this men started using fertile and

Vol 2, Issue 5, May 2017

forest land, rocks, ore and fuel resources which further reduced forest and useful land.

Again men started expecting much comfortability in living so he has started many industries to invent and manufacture products and services which provide luxury to the human life. For all this man was in need of electricity for that he has depended on coal initially to produce electricity later further he depended on water and wind for power generation. In the recent days he further using solar and atomic resources for the generation of electricity as the demand increased. This has become very dangerous to the environment.

Along with that we human beings started constructing infrastructure for housing and his other activities like industrial production and servicing and business by destroying forest.

These are the many ways men started destroying forest and constructing his own concrete forest which is spoiling natural environment in many ways. As per current data around 160000 acres of forest is destroying by men every day for different reasons by loosing around 50,000 plants.

IN the past agriculture was doing by men in natural ways by using natural manures, but now as science improved it has its image in agriculture also. For getting more and quick yields we have started using chemical fertilizers which are dissolving in soil and water and pesticides polluting are by mixing with it. Because of the above reasons the soil has become barren and not becoming useful for agriculture also spoiling the environment.

Next is industrialization which is much dangerously effecting the environment. For starting industries men started cutting trees and utilized the same land for industrialization because of this forest area came down drastically. Also the different types of waste coming out of industries contaminated air, water and soil, polluted all the natural sources. Also this has created sound pollution and light pollution by omitting some dangerous light rays.

Next is turn of general public with their daily activities for their comfort and luxury started overutilization of natural resources and power started exploiting the nature. Also for his greedy he has started constructing more infrastructures and stated depending more on machinery for his work to do which leads in to serious ways of pollution which leads in to depletion of ozone also. Also wasting the natural resource like water ore etc. Usage of useless things for his comfort like plastic and equipments like refrigerators, coolers, and heating equipments release dangerous gases which lead in to depletion of ozone. About more than 8 million tones of plastic is dumping to the sea every year in the world.

Adding to this, man with his greed started using atomic fighting with others through which he is destroying himself

as well also the living things on the earth one best example to this is Hiroshima and Nagasaki of Japan incident.

This is how men has walked in the way of destroying the natural environment and created his own artificial and dangerous environment like digging his own grave yard.

IV. EFFECT OF HUMAN DEVELOPED ENVIRONMENT:

As I was mentioned instead of becoming a part of natural environment men become dominant and created his own environment containing concrete forest with several other pollution agents connecting to it and finally made natural environment as small part of it. Because of this artificial environment men lost many things in going towards luxury and comfort, now feeling effects of this directly.

As men started destroying forest for several uses which is affecting in such a way that we care feeling shortage of oxygen now. Not getting proper rain. As forest land becomes dry land it become barren land and becomes no use. Soil erosion started as there is no strength in the soil. One more main cause created due to lessening of forest is increasing of pollution and temperature.

Because of farming methods which currently following by men to get more and quick yield leads to polluting soil and water source by chemical fertilizers, finally soil will become poisonous and there will be of no use of it and air pollution because of usage of chemical pesticides for crops leads into dangerously effecting the environment. This will together affect human directly that whatever food we have contains dangerous chemical contents.

Usage of artificial products in daily life which leads into mixing of chemicals to soil, water and also to air. This leads into pollution of the entire earth.

One such a material men is highly depending is plastic which is effecting environment in such a way that the air is polluted to a maximum extent is because of plastic, as manufacturing process of plastic releases dangerous gases as well plastic doesn't decompose on its own so to destroy if we burn it, it pollutes the air very dangerously.

Next effect which we can see is the major effect in all the constituents of environment such as air, water, soil, light are getting polluted along with that sound also increased beyond the normal limit.

As the industries releasing dangerous gases, chemicals in liquid and solid form during the process of production of different products so which leads into pollution of air to maximum extent. Water source is

Vol 2, Issue 5, May 2017

contaminated to maximum extent by industrial waste which leads into water pollution also industries polluting soil to maximum extent by solid waste of industries which leads into reduction of useful land & water for use.

Beyond all this sound produced by industries may be some times beyond audible limits which lead into sound pollution. Adding to all this some industries emit dangerous light rays which mixes with sun rays leads into light pollution too.

Because of all this pollution temperature of environment increasing and also we are not getting oxygen to breathe, proper water to drink which makes difficult to live.

Over consumption of electricity leads into going for producing electricity by dangerous way like atomic source. Which is dangerous than any other process which may destroy entire earth itself. In some daily routines men polluted environment in such way that we are making earth's safety jacket called ozone to deplete.

Like this because of human activities environment got polluted and spoiling environment which is making us difficult to live on earth.

V. MEASURES TO SOLVE THE PROBLEM

Directly we can tell that planting more and more oxygen emitting trees is one of the solutions for reducing the pollution and improving the quality of the soil for growing more trees and to get rain by reducing temperature.

Next one more step is reduction of plastic and related items drastically.

Starting again environmental friendly methods of agriculture process without using chemical fertilizers.

Taking more initiatives by the industries to reduce the omission of pollution agents to the different constituent of earth like water, soil, air etc.

Men also should take initiative in reducing the utilization of natural resources and exploitation of natural resources.

Men also should reduce usage of machines and depending on them for the work to get it done. This leads into less utilization of fuel and electricity so nature will be saved as we are going to depend nature to maximum extent.

Also over utilization of natural resources should be reduced and should not disturb the nature for our greedy. These are some of the initiative which solves the problems for us.

VI. CONCLUSION

God has given everything to men on earth to live comfortably by using it to limited extent. But men utilized all the resources to maximum extent and exploited all the resources because of his greediness and for his luxury and comfort ability. Now dangerous alarm is ringing that we have to take initiative to bring back environment to

normalcy. So that the men can survive on earth for some time if not going to do the same mistake of exploiting the environment and digging his own grave yard. Instead of that let us and take a oath of changing the way of living and taking initiative to improve the environment to become part of environment to live safely on earth.
